EDUCATION

Vellore Institute of Technology, Amaravati

(September 2021 - May 2025)

Bachelor of Technology in Computer Science and Engineering | 9.16 CGPA

PROFESSIONAL EXPERIENCE

Hari and Company Investments Madras Private Ltd. (formerly Vivriti Capital Private Limited)—NBFC (B2B & B2C digital lending)

Tech Stack: Java, Spring Boot, MySQL, MongoDB, Redis, Apache Kafka, multithreading, API gateway, distributed tracing, circuit breakers

Apollo—Loan Operating System (LOS)

(Intern, February 2025 - August 2025)

- Built and maintained a B2C Loan Operating System enabling customers to apply for product-based loans with a seamless digital experience. Implemented end-to-end loan processing workflow (KYC checks, initial & credit filters, document upload, penny drop verification, disbursement).
- Developed schedulers with ShedLock, configured 2 MongoDB clusters & 1 MySQL instance, enabling parallel processing and reducing job failures by 30%.
- Integrated Redis caching, improving API response times by 40% and enhancing overall system performance.

Zeus—Loan Management System (LMS)

(Software Engineer, August 2025 - Present)

- Developed and enhanced the Zeus loan management system covering repayment schedules, accruals, penalties, DPD tracking, and collections, including upfront interest deduction; exposed and routed LMS capabilities through an API gateway and adopted distributed tracing to debug end-to-end loan and repayment flows across services.
- Implemented intelligent repayment allocation with dynamic grace-period handling and automated overdue/DPD calculation—improving repayment accuracy by 25%—using multi-threaded processing for heavy allocation and schedule recompute paths and circuit breakers around fragile external and downstream integrations to avoid cascade failures.
- Built loan update workflows and Virtual Account-based collections so clients repay via VANs with automated reconciliation and penalty computation, cutting manual intervention and reconciliation effort by 30%; integrated Apache Kafka for asynchronous repayment and reconciliation events to decouple services and stabilize peak load.

PERSONAL PROJECTS

E-Commerce Website | React.js

- Established a React.js-based e-commerce application enabling users to browse products, add items to their cart, and complete checkout with personal details.
- Used React Router for smooth navigation and configured JSON Server to fetch product data, enabling fast and efficient data retrieval for a seamless user experience.

Social Media Analytics—Facebook | Power BI, Python, Matplotlib

- Engineered the extraction and aggregation of 1,000+ Facebook data fields (likes, comments, posts, and feedback) to enable deep engagement and performance analysis.
- Transformed and visualized data using Power BI and replicated dashboards with Matplotlib (Python) to deliver consistent, scalable, and reproducible insights.

TECHNICAL SKILLS

Programming Languages: Java, Python

Databases: MySQL, MongoDB

Web Development: Spring Boot, React.js, Node.js, HTML, CSS

Version Control & Platforms: Git, Postman, Swagger, Keycloak, SonarQube

Artificial Intelligence / Machine Learning: ANN, CNN, RNN (LSTM, GRU), Encoder-Decoder Models, Attention Mechanism

CERTIFICATIONS

- Java Master Course on Udemy.
- Introduction to Machine Learning course—Udemy.
- Gemini For Developers badge – Google Cloud.

ACHIEVEMENTS

- Achieved 2nd prize out of 60 teams in a challenging 24-hour hackathon by leading a team of 3 members.
- Accomplished 2nd prize in a NeoCodeathon conducted in my college among 800 students.
